

DIY Management Activity

Group: 1

Specific Goal and Objective: Fire Resiliency

Forest Description/Management Plan Overview: Your property is made up of coast redwood, Douglas-fir, with tan oak, bay, and huckleberry in the understory. Your property was clear-cut in the early 1900's and has un-entered second growth trees dominating the overstory with smaller trees in the understory. There was a fire in the 1950's that damaged some of the trees and caused the bay to resprout vigorously. Your management plan has the goals and objectives to be managing for fire resiliency, wildlife habitat, and personal recreation.

Questions

1. What are you choosing to do with the woody debris that was created from management activities? Why?
2. How are you going to monitor your progress, success, and determine when you need to come in for maintenance.
3. Forest Stewardship is not a one and done thing. How will you be maintaining your work into the future?
